For Immediate Release

Revolutionary presentation solution tailored for high-end corporate AV

February 2015 – Analog Way is excited to unveil an outstanding new solution designed to fully control the LiveCore™ series in a Crestron environment, the AW VideoCompositor. The AW VideoCompositor linked-up with the powerful processing capabilities of the LiveCore™ systems, offers flexibility for fixed installations to a level never reached before. The AW VideoCompositor will be showcased during ISE on Analog Way's booth #11-H58 from February 10-12, 2015, in Amsterdam, the Netherlands.

With the increasing demand in fixed automated environments for sophisticated and versatile presentation systems, Analog Way in cooperation with Technidream, an official Crestron Services Provider, created the AW VideoCompositor (Ref. AWVDC). The AW VideoCompositor is a comprehensive solution offering a centralized and simple graphic control interface of the presentation venue and content.

With this new solution, non-technical users will be able to see the display and manage the presentation content directly on Crestron Smart Graphics™ compliant panels. This allows for anyone to produce fluid and memorable presentations, before only available in the live event space.

AW VideoCompositor includes two different modules: a Crestron driver for controlling the advanced features of the LiveCore™ systems, and a high-end Crestron Smart Graphics™ module. These provide outstanding functionalities with minimal programming including visualization in real time of the whole scene with layer positions, display of source snapshots refreshed automatically, PIP source management through drag and drop, capability to change position and size of a layer through tap or flick of a finger, etc.

Through Analog Way's LiveCore™ AV processors and AW VideoCompositor, system integrators are now able to provide seamless control of the video, audio, lighting, blends, HVAC, etc., of any corporate venue on a single Crestron touch panel control system.

With the advanced features of AW VideoCompositor, system integrators and high-end corporate venues will benefit from unprecedented flexibility and live customization in the management of their presentations. With such a solution, fixed installations are now able to achieve safe, creative and seamless presentations comparable to event standards.

Analog Way, Pioneer in Analog, Leader in Digital

Analog Way is a leading designer and manufacturer of presentation switchers and image converters with worldwide locations. The company designs a wide range of computer to video scan converters, scalars, seamless switchers and up/down converters. The products provide the most advanced solutions in the Broadcast, AV, Rental & Staging, Church, Corporate and Industrial markets.
